

Division Dash

Materials

Deck of Cards

How to Play

1. Remove all the tens and face cards from the deck of cards and shuffle them.
2. Deal the first player three cards and the second player three cards. You cannot change the order that they are laid out.

Those three cards make each player's three digit dividend.

3. Flip up a fourth card for each player. This card will be the divisor.
4. The players get thirty seconds to come up with a partial quotient. They cannot do work on the side to come up with a partial quotient. They should be able to come up with an "easy" multiple that will work. Whatever the player's partial quotient is for that round is their score for the round.
5. Once both players have found a partial quotient, put those cards to the side and repeat the steps.
6. Players continue to add up their partial quotients from each round until one player reaches 500.
